

Energy Enrober Master XXL

Energy Enrober Master XXL

The Energy Enrober Master XXL can enrobe two layers at once creating an extra thick chocolate layer or allowing for faster enrobing. Additional length is 500mm.

The Master XXL model features two curtain boxes with vertical and horizontal flexibility and adjustable feet, nozzles for easy adjustment of chocolate curtain thickness and two bottoming rollers with adjustable speed and two height-adjustable blower systems. This allows the enrober XXL to run at higher speeds while keeping the thickness of the enrobed layers constant.

The Nielsen Energy enrobing concept has its chocolate mass feeding directly injected to the consumption flow to ensure a constant flow of finished tempered chocolate mass.

The new and innovative energy method gives a high quality to all final products and furthermore it is the cheapest method both investment and energy wise.

The Nielsen Energy Enrober has a lot of benefits compared to the traditional enrobers: With its high working temperature it only allows the existence of high quality crystals and also ensures a more liquid and equal chocolate mass which makes it easier to handle the chocolate.

Furthermore, because of the chocolate's liquidity there is no build up over time which minimizes the down time. This finally results in a high-quality product produced with less energy and less cost than what has ever been possible!

UPS/EFU

- The tempering index and the temperature of the mass mixture are kept constant.
- Double enrobing allows for extra thick chocolate layers.
-
-
- Reduce 2/3 energy with the Nielsen Energy Enrober when combined with the SuperNova Energy tempering machine.
- The thickness of the enrobed layer is always constant.
