

Alice™ Z Dynamic Triple

Alice™ Z Dynamic Triple

Choose the Alice™ Z Dynamic depositor in triple head configuration and combine up to three different masses into one deposited, extruded or wire-cut product.

Choose the Alice™ Z Dynamic depositor in triple head configuration and combine up to three different masses into one extruded or wire cut product. This configuration is used for multi color extrusion, depositing and drop fill depositing (onto conveyor) — create sophisticated and innovative products by combining different masses and fillings. All movements are servo driven and fully programmable. All programming is done from a color touch screen panel and can be adjusted in real time. Choose this configuration if you wish to make fully controlled and complex extruded shapes onto a continuously moving conveyor. This machine is easy to clean. The Alice™ hopper also makes it adaptable to quick product changes thanks to its off-line capability.

UPS/EFU

- Preserves dough structure and texture
- Provides extremely fast change-overs
- Unique "hose-down" cleaning
- Large selection of innovative die tools
- Gently handles dough with inclusions
- Handles aerated masses

The Aasted Machinery Program
