AUTOMATIC PRES FORM FOR HAM

TO OBTAIN A UNIFORM FORM FOR ALL HAM PIECES

Ham is placed on a conveyor belt and it comes into the forming area.

The system is composed of three cylinders : two lateral sides and one at the top .

Photocells detects the ham and the pneumatic cylinders compress the ham obtaining the good form.

- Conveyot belt built in PVC.
- Mold parts built in technical plastic material.
- Interchangeable molds and forms.
- Pneumatic starting with automatic program.
- Pressure and pres time program.
- Built in stainless steel AISI-304.

OPTIONS

- Iberico ham mold.
- Shoulder ham mold.

| TYPES: | FAJ-800 |
|-------------------------|----------------------|
| Lenght: | 1800 mm. |
| Widht: | 1680 mm. |
| Height: | 1600 mm. |
| Weight: | 650Kg. |
| Electrical consumption: | 0,18 Kw. |
| Air consumption: | 95 lts/min. |
| Aire pressure : | 6 kg/cm ² |
| Production: | 600 pieces/h. |
