

EASY / EASY/1

Manual membrane skinning machines

MEMBRANE SKINNING

The advantages of the EASY

- **The smallest MAJA membrane skinning machine:**
Ideal solution for butcheries and for starting with the membrane skinning technology.
- Two possibilities of transport roller cleaning:
Type EASY: by patented MAJA 3-roller cleaning system enabling autonomous installation from compressed air connection.
Type EASY/1: transport roller cleaning by compressed air.
- Optimum membrane skinning result for **more yield** and **increased benefit**.

MAJA[®]

Since 60 years, MAJA has developed, produced and distributed high-quality derinding and membrane skinning machines for the requirements of butcheries and industrial meat processors. The MAJA Membrane Skinning Technology allows the gentle removal of the membranes and the profitable refinement of your precious meat cuts.

The MAJA principle for increased benefit: Anatomic deboning and MAJA Membrane Skinning machines.

Advantages of machine-based membrane skinning:

- Time savings by faster processing of the cuts.
- Increased throughput.
- Improved product quality: The surface of the precious meat cut remains intact. Notches due to skinning with hand knives, which lead to drying and thus to distinct quality drops, are prevented.
- Membrane skinning means refinement of precious meat cuts ⇒ added value!
- Skinned meat cuts can be sold at a better price.
- Easy operation: Even nonskilled employees can remove membranes in an expertly way.

Equipment & features

Applications:

- For manual (open) membrane skinning for all cuts of pork, veal, beef, game, poultry and horse, as well as from precious meat cuts from lamb, ostrich or kangaroo.

Machine structure suited to daily use:

- Easy operation by foot pedal with ergonomic design (flat material), thus more comfort for the operator without marks left at the operator's foot.
- Mobile, by guide and fixed rolls.
- The membrane box can be removed from the machine's front and back for easier handling.
- Easy maintenance thanks to good accessibility of all machine components.

Compact machine structure:

- Convenient cutting width of 341 mm.
- Ideal machine for companies entering into the membrane skinning technology, for small handcraft butcheries and for producers of high-quality meat specialities.
- Space-saving machine structure, thus flexible installation, e.g. in the production facilities, in the cut-off department and also in the sales area of the shop.

EASY

The strong points of the EASY range: Simple, safe, user-friendly.

Transport roller cleaning:

- For a constantly perfect skinning result, the tooth roller is automatically cleaned from residual membranes. Thus no interruption of the skinning process for manual cleaning of the transport roller.
- Two possibilities of transport roller cleaning at the customer's choice:
EASY: Transport roller cleaning without compressed air by patented MAJA 3-roller cleaning system, enabling flexible machine installation.
EASY/1: Transport roller cleaning by compressed air. Ideal solution if mainly beef cuts have to be skinned. Easy cleaning, as the compressed air nozzle bar can be put into a cleaning position.

Easy and safe handling of the knife and the knife holder:

- No removal of the knife holder for cleaning and knife changing. The knife holder remains in the machine and is only put into cleaning position.
- Advantage: The sensitive knife holder cannot be damaged by accident. Thus always good skinning quality, reduced maintenance costs and increased operational safety.
- The quick-locking device enables tool-free knife changes within seconds.
- Individually adjustable knife position for optimum adjustment to different meat cuts.
- Reduced risk of injury

MAJA[®]

Type	Cutting width mm	Width of machine mm	Depth of machine mm	Height of machine mm	Electrical connection kW 400V/50Hz/3Ph	Weight kg
EASY	341	753	622	994	0,75	165
EASY /1*	341	753	622	994	0,75	165

* EASY/1 Compressed air connection 3/8" rapid coupling

Equipment & features

High standard of safety:

- The machine is in accordance with current CE regulations EN 12355 for derinding and skinning machines.
- This machine type is labeled with the GS seal of approval for safety, tested by the German recognized body BGN (German Accident Prevention & Insurance Association).

Hygienic machine design for optimum sanitary conditions:

- All machine parts are made from food safe material.
- Easy assembly and removal of all parts to be cleaned; thus time savings, thorough cleaning and high operational safety.
- Smooth surfaces, easy to clean
- Inserted and sealed side panels
- No screws in the food area
- Completely seamless processing
- Round bars
- Completely sealed switchbox for protecting the motor from splash water and dirt.

EASY: cleaning position

MAJA quality for durability and long-life cycle:

- Housing made from 2 - 10 mm stainless steel plates: providing solid construction for maintaining machine value.
- Use of high quality components with long lifecycle.
- Solid ON/OFF pushbuttons with special protection against water intrusion into the housing.
