

Machines for egg processing.

Egg Centrifuge **UDTJ 150** automatic

Egg Centrifuge

Centrifuge for eggs **UDTJ-150** is a device automatically. Wholly made of stainless steel. It consists of a housing, the drive unit, hopper, tank, screw and sieve. The shells are ejected from the machine automatically helped by screw through additional outlet mounted to the hopper.

The machine should be cleaned every day after work, first unplugging the hopper by removing the sieve, screw and removing the upper tank. Dismantled parts can be washed under running water, while the down part contains the drive unit, wipe with a damp sponge. This party machine is not usually contaminated.

Applications	Egg centrifuges used to produce fresh liquid egg.
How it works	The shells are automatically removed to a container.
