Delta VacMap[®]™

Delta VacMap[®]

THERMOFORMING SHELF LIFE FROM A FLOW WRAPPER

Ilapak's Delta VacMap[®]™ packaging system will change the way you think about packaging fresh food products for **extended shelf life**.

Delta VacMap[®]™ is a truly innovative flow wrapping machine that produces attractive, traditional-looking packs with a shelf life that, until now, was only available by using thermoforming.

Particularly suitable for the spongy products that are typically found in the bakery industry, an **in-line vacuum** system allows the machine to extract the oxygen that is trapped inside the product itself.

KEY BENEFITS

- Same shelf life as thermoforming at a reduced cost
- Reduced material and labour costs combined with higher throughput
- Fast product size changes
- High quality pack presentation with print registered film
- Fully automatic feeding
- Three operating modes: Flow wrap, MAP and VacMap[®]™

Delta VacMap[®]™ the most attractive pack presentation at the lowest possible cost for fresh food products with extended shelf life.

Automatic product feeding system.

Card board feeder.
Card gravity magazine.

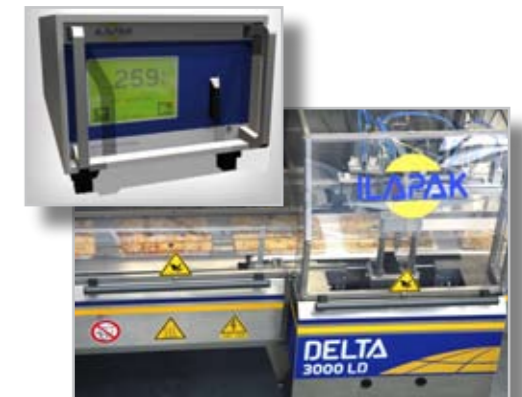

Easy to clean.

Easy product size change.

Vacuum carousel[®]™

MAP machine with in line gas control system.
