

AMC SuperNova Basic

AMC SuperNova Basic

The model at the heart of all AMC SuperNova machines - the Basic has capabilities ranging from straight heat exchanging to the highly precise creation of Beta V crystals in high-quality chocolate masses.

The heart of all AMC SuperNova tempering machines is the Basic module that comprises all the best of over 65 years in the tempering business. The AMC SuperNova Basic covers anything from straight heat exchanging of any pumpable mass to highly precise creation of beta crystals in high-quality chocolate mass. Our special flow optimized Shear scrapers are designed for combining horizontal and vertical mixing of the mass. This ensures effective mixing of the crystals created in the mass. The SuperNova water system ensures even temperature distribution and complete control of each zone. Using the Aasted SuperResponse technology the tempering machine instantly adapts the cooling water flow to the requirements dictated by the chocolate temperature and flow and thereby ensures a perfect tempering, at all times, using minimal water consumption. The user-friendly PLC touch screen gives the operator a clear overview of all the process parameters. Memory for storing 20 recipes makes the SuperNova an obvious choice when having to switch between masses. Allen-Bradley or Siemens – it's your choice.

UPS/EFU

- Unique Scandinavian design in stainless steel
- Straight heat exchanging of any pumpable mass
- Ensures longer shelf life on your chocolate products
-
- Constant crystal content
- High performance and low operating cost

The Aasted Machinery Program
