

# SuperNova Energy Basic

# SuperNova Energy Basic

The model at the heart of all SuperNova Energy machines - the Basic has capabilities ranging from straight heat exchanging to the highly precise creation of Beta V crystals in high-quality chocolate masses.

With rising energy prices, and a worldwide push to be more environmentally friendly, the SuperNova Energy machine collection is the tempering solution of the 21st century. Our newly developed energy unit significantly reduces water and power consumption. The SuperNova Energy produces energy savings up to 50% of production costs compared to traditional tempering machines. Our innovative energy tempering process ensures entirely stable Beta V crystals in the chocolate. Our process also guarantees an extended crystallization period up to ten times longer than the standard, followed by continuous mixing and adjustable temperature controls. We also built upon the AMC SuperNova platform by developing a higher temperature output to improve even flow of the mass. Handling your chocolate mass has never been easier - even reduce the necessary cocoa butter and achieve the same results as with a traditional temperer.

## UPS/EFU

- Up to 10 times longer crystallization period
- Smaller in size than traditional tempering machines
- Scandinavian design
- Stable Beta V crystals only
- Reduces operation costs at least 50%
- High output temperature

# The Aasted Machinery Program
